REPEAL THE STEEL

Now More Than Ever, It's Time to Kick the Habit... The Steel Strapping Habit

WARNING: Steel strapping can be hazardous to your bottom line, your employees, your customers, and your products. Quitting steel strapping greatly reduces your risk of accidents and saves you money.

Steel strapping also presents a safety hazard all throughout its' life cycle; from carrying and loading the 100 lb coils to applying the strapping, removing the strapping and finally the discarding of the strapping.

In addition to steel strapping being a safety hazard, the cost of steel is on the rise with the US levying new and larger tariffs on imported steel allowing for domestic manufacturers to raise steel strap pricing across the board.

HERE'S THE SPIEL "POLYESTER THE BETTER SOLUTION"

Steel strapping is an older, less safe and more expensive technology.

Polyester strapping and cord, by all measures are superior products for the following reasons.

- First and foremost Polyester greatly reduces the lost time injuries and liability caused by the weight, sharp edges and ends of steel strapping
- Polyester is up to 4X lighter making it much easier and safer to handle
- Polyester longer length coils are labor saving - requiring less change time
- Polyester is cleaner and non-corrosive, it will not rust or stain products
- Polyester is non-abrasive and will not mar products
- Polyester has high impact resistance making it less likely to burst
- Polyester has "elastic memory" and will hold packages tighter
- Used Polyester is easier to discard or recycle
- Customers are demanding it. Many will no longer accept Steel Strapping on their premises.

Stained and Marred Damaged Product

Steel lacks elasticity when loads are compressed

CONVERTING FROM STEEL

THESE INDUSTRIES STILL HAVE OPPORTUNITIES FOR CONVERSIONS

- Wood Truss Manufacturing
- Equipment Manufacturing
- All Types of Wood/Lumber/Panels
- Plastic Pipe
- Aluminum Ingots
- Ceramic Tile
- Wood Preservers
- Concrete Blocks
- Extruded Metal/Tubes
- Glass Sheets/Textiles/Fibers
- Truck, Car and Bus Body Manufacturers
- Brick Manufacturing
- Decorative Paver Stones
- Rail Car Securement*

+ Plus many small/medium industrial shipping rooms still use steel strapping

* Specific Polychem Polyester Plastic Strap Products are AAR Approved for TYPE IV Securement AAR 53

* Specific Polychem Polyester Cord Products are AAR Approved for Type 1A Securement AAR 38

TIPS TO HELP SELL THE PROGRAM

- 1) When selling the conversion ask your customer if they have a Safety Director who can participate in the discussions.
- 2) One of the biggest objections to converting is that steel strap feeds under the pallet easier. Our inexpensive Pallet Threader attaches to a broom stick and easily threads Polyester strapping under the pallet.
- 3) The cost of buying new tools for Polyester is often covered in 1 year's strap savings.

SHOW ECONOMIC JUSTIFICATION

Economic Justification

First determine your cost per foot for the steel product you're currently using and its polyester replacement

$$\frac{\text{Price/Coil}}{\text{Feet/Coil}} = \text{Cost Per Foot} \quad \text{Steel} \quad \text{Cost Per Foot} \quad \text{Polyester}$$

See strap specifications on back cover

IT'S A WIN, WIN, WIN PROPOSITION

- 1) Distributors will be providing a superior performing product.
- 2) Customers will save money and experience a safer work environment.
- 3) The ultimate consumer will receive less damaged product and are less likely to injure themselves while unpacking and disposing the used steel.

NOTE: If a customer uses a pallet of steel each month, they are a good candidate for conversion to polyester strapping or woven and composite cord strapping.
